Sinmax's latest innovation – the VCS-80 – is a computer-based system which is suitable for entertainment, education and personal information processing applications. In addition to the standard games, the system also allows the user to write his own program. The easily opeated program and step-by-step manufal will lead the use through the fundamentals of BASIC computer language.

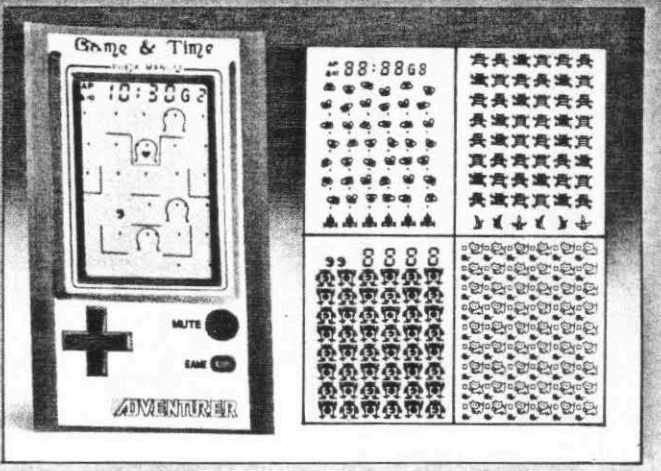

Our design team is fully skillled in both hardware and software applications, and fully capable of satisfying all buyers' requirements. Your own ideas are welcome, and we encourage OEM orders. Send for further information now.
